Jicky's "How to improve signal"

During a virtual session, bandwidth usage can be affected by:

Video quality: Higher resolution videos will consume more bandwidth.

In this session, I'll teach you how to lower the resolution of your video for proper playback.

Number of participants: More people in the session will increase bandwidth usage.

Doing a Live Event eliminates that issue. I'll teach you the difference.

Other devices: Other devices in the home may be using bandwidth simultaneously.

I'll demonstrate how to eliminate those systems during your call.

Outdated hardware: Older devices may not handle high bandwidth well.

Weak signal: Poor network signal can impact bandwidth usage.

What devices should you use? I'll demo how to find the best location.

**Email me at the link below for how to
format all of the above & the schedule for next class.**
